# java mode构建

构建完成后要打包一个可运行的jira包需要对gradle.build 进行配置

```
plugins {
    id 'java-library'
}
jar {
    duplicatesStrategy =
DuplicatesStrategy.EXCLUDE
    archiveFileName = 'density.jar'
    manifest {
        attributes 'Main-Class':
"com.kotlin.runjava.MyClass"
    }
```

```
    from {

configurations.runtimeClasspath.collect {
it.isDirectory() ? it : zipTree(it) }
    }
}
java {
    sourceCompatibility
JavaVersion.VERSION_1_8
    targetCompatibility
JavaVersion.VERSION_1_8
}
```

然后使用这里进行打包。

jar包运行:

java -jar MyJar.jar arg0 arg1

```
java -cp MyJar.jar com.xxx.xxx.MyMainClass arg0 arg1
```
